

Pre-FEED and FEED

Capability statement

The front end engineering design (FEED) activities of a project are analysed to determine feasibility, ensure a suitable design and to estimate the initial project costs.

Quality

At Jee, we understand the importance of the preliminary design work. We produce the highest quality front end engineering design, ensuring the success of a project.

Our experience, knowledge and up-to-date technical expertise means we will add value to your project and provide you with the best design for your requirements. We are proud to be certified by Lloyd's Register QA to ISO9001 for "Provision of pipeline engineering services to the oil and gas industry" since 1995.

How we do it

We take concepts explored in feasibility studies a stage further. By combining our expert engineering judgement with small scale studies we refine the key aspects of the design to eliminate unnecessary features. This approach ensures the project is not over engineered and allows cost and time savings to be made.

Jee has many years' experience in pre-FEED and FEED studies and our specialist engineers have provided valuable input for over two decades on a number of projects world-wide.

Proven track record

- ✦ Perenco 2008 – Bure North tie-back development
- ✦ Perenco 2006 – East Davy pre-FEED pipe design and installation
- ✦ Apache 2006 – Bacchus field development

Jee provided an excellent technical response to our enquiry which allowed us to develop the field in the most economic way.

Noppadol Pinpipat, Manager, B6/27 Asset, PTTEP Siam Limited

List of related services

- ✦ Feasibility, conceptual design
- ✦ Flow assurance
- ✦ Field development studies
- ✦ Verification
- ✦ Detailed design specialist studies
- ✦ Installation engineering
- ✦ Construction support
